

Mobilized Reporting Solution

ReportNOW empowers you to run, submit and schedule the reports with your real-time data on your PDA phones just the way as you are viewing them on the desktop/laptop. It is easy to install, use and is flexible, scalable and capable for multiple users with ease of affordability. With internet access, users can obtain the information they need anywhere and anytime.

Benefits :

Increase productivity and responsiveness

- ◇ Users can enjoy the benefits of Mobile Business Intelligence with real-time access to the time-sensitive data while you are out of the office or even when you are traveling.

Flexibility

- ◇ Reports can be presented in the PDF and Excel format which provide great flexibility for users to further modify the presentation of the report data to suit their needs.
- ◇ **ReportNOW** is compatible with a wide range of Database systems including MSSQL, Oracle and other RDBMS. Users can use Windows Mobile and Microsoft Windows Vista/XP for viewing the reports.

Reliability

- ◇ Users will receive messages when new reports are available. This ensures that the users will not miss out any new reports.

Low set-up cost

- ◇ **ReportNOW** does not require any kind of special hardware and does not take much time to implement nor does it require expensive and time-consuming support by highly qualified personnel whereas it provides you with high business value in return.

Main features :

- ◇ **Multi-user access.** Users can access the same reports via their mobile devices and PC clients at the same time.
- ◇ **Run Report.** Reports are generated from the UDR scripts and can be previewed immediately.
- ◇ **Submit Report.** Reports can be run on the mobile and stored in the server for viewing later. Users can retrieve the reports in the **"Favourites"** folder anytime and do not have to spend a long time to wait for the creation of a report with huge amount of data.
- ◇ **Schedule Report.** Reports can be scheduled to run at a certain time. Users can view and manage the reports afterwards.
- ◇ **Messaging function** stores the messages generated upon the creation of new reports and any report errors.
